

AOD403/AOI403

30V P-Channel MOSFET

General Description

The AOD403/AOI403 uses advanced trench technology to provide excellent $R_{\mathrm{DS(ON)}},$ low gate charge and low gate resistance. With the excellent thermal resistance of the DPAK/IPAK package, this device is well suited for high current load applications.

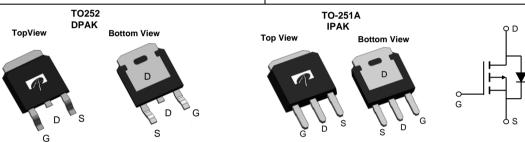

Product Summary

 V_{DS} -30V I_{D} (at V_{GS} = -20V) -70A

$$\begin{split} R_{DS(ON)} & (\text{at V}_{GS}\text{= -20V}) & < 6.2\text{m}\Omega \quad (< 6.7\text{m}\Omega^*) \\ R_{DS(ON)} & (\text{at V}_{GS}\text{= -10V}) & < 8\text{m}\Omega \quad (< 8.5\text{m}\Omega^*) \end{split}$$

A. The value of $R_{0,1A}$ is measured with the device mounted on $1in^2$ FR-4 board with 2oz. Copper, in a still air environment with $T_A = 25^{\circ}$ C. The Power dissipation P_{DSM} is based on R _{0JA} and the maximum allowed junction temperature of 150 ° C. The value in any given application depends on the user's specific board design, and the maximum temperature of $175^{\circ}\,$ C may be used if the PCB allows it.

- D. The $R_{\theta JA}$ is the sum of the thermal impedence from junction to case $R_{\theta JC}$ and case to ambient.
- E. The static characteristics in Figures 1 to 6 are obtained using <300μs pulses, duty cycle 0.5% max.
 F. These curves are based on the junction-to-case thermal impedence which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of T_{J(MAX)}=175° C. The SOA curve provides a single pulse rating.
 G. The maximum current rating is package limited.
- H. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with T_A=25° C.

B. The power dissipation P_D is based on T_{J(MAX)}=175° C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

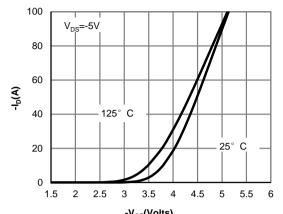

C. Repetitive rating, pulse width limited by junction temperature $T_{J(MAX)}$ =175° C. Ratings are based on low frequency and duty cycles to keep initial $T_J = 25^{\circ} C$.
